FOR IMMEDIATE RELEASE

ECC Releases Fast and Feature-Rich Reporting Dashboard for System Center Operations Manager 2007 Data Warehouse and ACS Databases

Date: April 29, 2008

Microsoft Management Summit 2008, Las Vegas Booth 113

Enterprise Certified Corporation (ECC) announced the availability of the feature rich Data Warehouse and Audit Collection Services event reporting dashboard for Microsoft System Center Operations Manager 2007. The ECC eSCOP™ (Enterprise System Center Operations Portal for ACS) is an extensible and intuitive dashboard supporting the Data Warehouse and ACS with enhanced administration, advanced filtering and automatic event archiving with unmatched speed.

ECC eSCOP uniquely extends System Center Operations Manager by providing flexible, customizable and extremely fast reporting of application, system, software and security events. All Data Warehouse database events including those generated by Microsoft and third party management packs can be reported against to provide trend analysis and other enterprise critical current and historic information. The ACS database reporting and archiving dashboard is designed to support extensive security audits and examinations associated with regulatory compliance such as Sarbanes Oxley, HIPAA, FISMA and PCI.

“There is a need for speed when reporting against very large Operations Manager databases,” stated ECC managing partner Robert Williams. “We built eSCOP™ to provide a unified administrative environment for the Data Warehouse and ACS with dynamic filtering and event management and archiving. Our unique architecture permits report output that is significantly fast. No other vendor provides this breadth of database event coverage. IT professionals can generate reports on virtually any event stored in the Data Warehouse and our ACS reports are designed to streamline security and regulatory compliance. ACS archived data can be retrieved without the need to reload the data into SQL Server, thereby reducing costly system overloads and providing the fastest available ACS reporting. “

“System Center Operations Manager 2007 provides end-to-end service management, helping customers increase efficiency and achieve greater control over their IT environment,” said Robert Reynolds, director of System Center product management at Microsoft Corp. “We are pleased that ECC has combined the eSCOP Data Warehouse and ACS dashboard with System Center Operations Manager to provide our mutual customers with an expanded solution that includes security event management and compliance.”

With the ability to now collect and store terabytes of Data Warehouse and ACS events, IT professionals need tools that permit very discrete filtering, custom report generation, and logical archiving with

useable speed requirements. ECC eSCOP™ is an industrial strength platform meeting those challenges head-on. The eSCOP™ console organizes IT security events facilitating rapid management around industry best practice standards. For organizations with SOX, FISMA, HIPAA, GLBA or PCI compliance requirements, eSCOP™ provides expert based modules. eSCOP™ ships with over 100 customizable management reports. ECC eSCOP™ is the ideal tool for enterprise organizations with large data collection, reporting and archiving requirements.

ECC also announced the availability of Version 3.1 of its popular Enterprise Compliance and Auditing (eCAR™) management pack. The ECC Enterprise Compliance Auditing and Reporting solution provides standards based IT security event collection and reporting for the Sarbanes Oxley Act, HIPAA, FISMA, PCI, J-SOX, BASEL and GLBA. ECC eCAR™ provides repeatable, measurable and sustainable results to meet compliance requirements. Taking advantage of the new data warehousing of System Center Operations Manager 2007, eCAR™ for System Center Operations Manager 2007 permits the collection and auditing of 175 IT events and the rapid output of over 100 compliance reports based upon National Institute of Science and Technology recommended schema. The customizable reports are designed to provide output that is inherently usable by IT professionals, corporate management and external auditors. The eCAR™ knowledge base provides cross reference support of industry standards and regulatory requirements.

ECC eCAR™ is designed to provide repeatable, measurable and sustainable IT security and regulatory compliance event auditing and reporting. Customers can employ eCAR™ in a standard System Center Operations Manager 2007 environment or select advance auditing integrity by adding the optional Microsoft Audit Collection Services component.

Support services provided by ECC include System Center Operations Manager 2007 deployment consulting, IT security assessment and management, and training services. IT staffing and project management is available through the Asgard Global Alliance.

ABOUT ENTERPRISE CERTIFIED CORPORATION

With headquarters in Boulder, Colorado and San Francisco, California, ECC is privately held IT security software product and services company with a focus on best practices and regulatory compliance. ECC is a Microsoft Gold Certified Partner.
