ECC Enterprise Compliance Auditing & Reporting

PURPOSE

ECAR IA-2: User Identification and Authentication

FEATURES

Control: The information system uniquely identifies and authenticates users (or processes acting on behalf of users).

CONFIGURATION

Supplemental Guidance: Authentication of user identities is accomplished through the use of passwords, tokens, biometrics, or in the case of multifactor authentication, some combination therein. FIPS 201 and Special Publications 800-73 and 800-76 specify a personal identity verification (PIV) card token for use in the unique identification and authentication of federal employees and contractors. NIST Special Publication 800-63 provides guidance on remote electronic authentication. For other than remote situations, when users identify and authenticate to information systems within a specified security perimeter which is considered to offer sufficient protection, NIST Special Publication 800-63 guidance should be applied as follows: (i) for low impact information systems, tokens that meet Level 1, 2, 3, or 4 requirements are acceptable; (ii) for moderate-impact information systems, tokens that meet Level 2, 3, or 4 requirements are acceptable; and (iii) for high-impact information systems, tokens that meet Level 3 or 4 requirements are acceptable. In addition to identifying and authenticating users at the information system level, identification and authentication mechanisms are employed at the application level, when necessary, to provide increased information security for the organization. Control Enhancements: (1) The information system employs multifactor authentication. SOURCE: NIST 800-53
