

Security Seminar

Microsoft®

I would like to take this opportunity to invite you to join **Microsoft Corporation, Forrester Research, and Enterprise Certified Corporation** at a FREE half day event focused on the importance of **security and management in mid-sized businesses**.

An Analyst from **Forrester Research**, an independent research firm, will be on-hand to discuss where industry and market trends are going in the security arena. They will also look at current business pressures and offer some best practices.

Representatives of **Enterprise Certified Corporation** will be present to discuss their System Center based eSCOP™ security and compliance auditing, reporting and archival suite.

Also, a **Microsoft Security Advisor** will be on-hand to discuss Microsoft solutions that can help proactively address your business needs around security, risk & compliance. Specifically, the discussion will touch on security as it relates to the desktop, server management, network protection, identity and access management, and data protection.

Lastly, we'll present a **"Get Healthy, Stay Healthy"** lunch where you will hear How Microsoft IT Does Information Security, a session where you will get an overview of the Microsoft IT environment and hear about the lessons learned and challenges Microsoft IT faces in managing and securing that environment. And to stay healthy, you'll hear about how Microsoft Premier Support can help you with problem resolution, deployment series and training or workshops.

Please join us for this very informative and exciting event!
