

Enterprise System Center Operations Portal for ACS

ECC eSCOP™ is an extensible and intuitive administrative console for System Center Operations Manager 2007's Audit Collection Services (ACS). ECC eSCOP™ is designed to report, filter and archive extremely large, enterprise-wide security event log data repositories. Building on the ACS capability to collect and store terabytes of IT events, ECC eSCOP™ provides IT professionals with the tools to facilitate advanced, protected and discrete filtering, custom report generation, and logical archiving at unmatched speeds.

ADMINISTRATIVE FEATURES:

- **ACS Console:** Manage ACS data administration with feature rich and intuitive user interface
- **Filter Rules:** Configure event collection using 15 filter parameters
- **Current Data Collection:** Use pre-selected values for collection filter parameters
- **Partition Management:** Manage partition settings, ACS event lifetime collection and partition growth
- **Configurable Archiving:** Archive event data beyond the ACS Event Lifetime window.
- **Formatting and Storage:** Specify file formats and offline storage.
- **Filter Display:** Provide filters view for peer review and audit health

REPORTING FEATURES:

- **IT Security Reporting:** Create best practices based rapid, customizable reports
- **Compliance Reporting:** Generate tuned reports for SOX, FISMA, PCI HIPAA and other regulations
- **Very Large Database Reports:** Reliably output reports on millions of event records
- **Report Usability:** Produce summary, detail, forensic expanded detail, event comparison, percent occurrence and trend analysis
- **Contact Scoping:** Target views and report with unique scoping
- **Intelligent Data Caching:** Utilize eSCOP caching schema to enhance speed and manageability

IT SECURITY EVENT MANAGEMENT & COMPLIANCE CONSOLIDATION

The eSCOP™ administrative console provides an intuitive user interface designed for collection management, filtering, forensic analysis, archiving and multiple format report output.

The eSCOP™ name reflects the advanced enterprise-wide ability to focus your *scope* on mission critical IT security events.

ECC eSCOP™ is the ideal tool for enterprise organizations with large data collection, reporting and archiving requirements.

The eSCOP™ console categorizes IT security events to facilitate rapid management around industry best practice standards. ECC eSCOP™ also provides support for SOX, FISMA, HIPAA, GLBA and PCI regulatory compliance.

ECC eSCOP™ consists of expert based modules that appropriately organizes event collection and reporting. Security IT events are classified and archived around best practice standard structures. Auditing and reporting is consistent with recognized regulatory examination recommendations.

ECC eSCOP™ centrally organizes archived event data in the ACS database and intelligently manages the information for rapid viewing, filtering, and reporting.

FLEXIBLE, EXTENSIBLE DATA VIEWS & REPORTING

System Center Operations Manager 2007 data warehouses collected information and utilizes SQL Server 2005 report services to provide standardize views. ACS provides the additional advantage of moving security information into a discrete database designed to maximize the validity of auditable event data.

With millions of records easily collected and stored within the ACS, ECC eSCOP™ meets the challenge of rapidly extracting the information and provides flexible viewing and reporting as administrator defined. The speed enhancements for viewing, transaction manipulation, and reporting is achieved through eSCOP™ unique indexing, database partitioning and caching.

ECC eSCOP™ ships with over 100 customizable management

Intuitive administration, expansive filters, archiving and security /health management with unmatched reporting speed

reports built. The multiple format reports provides summary, detailed, and forensic expanded reports. Graphical representations include event comparisons, percentage and trend analysis.

COMPETITIVE UNIQUE FUNCTIONS & FEATURES

The eSCOP™ administrative console and advanced reporting system boosts of additional features that sets it apart as an outstanding System Center Operations Manager 2007/ACS solution:

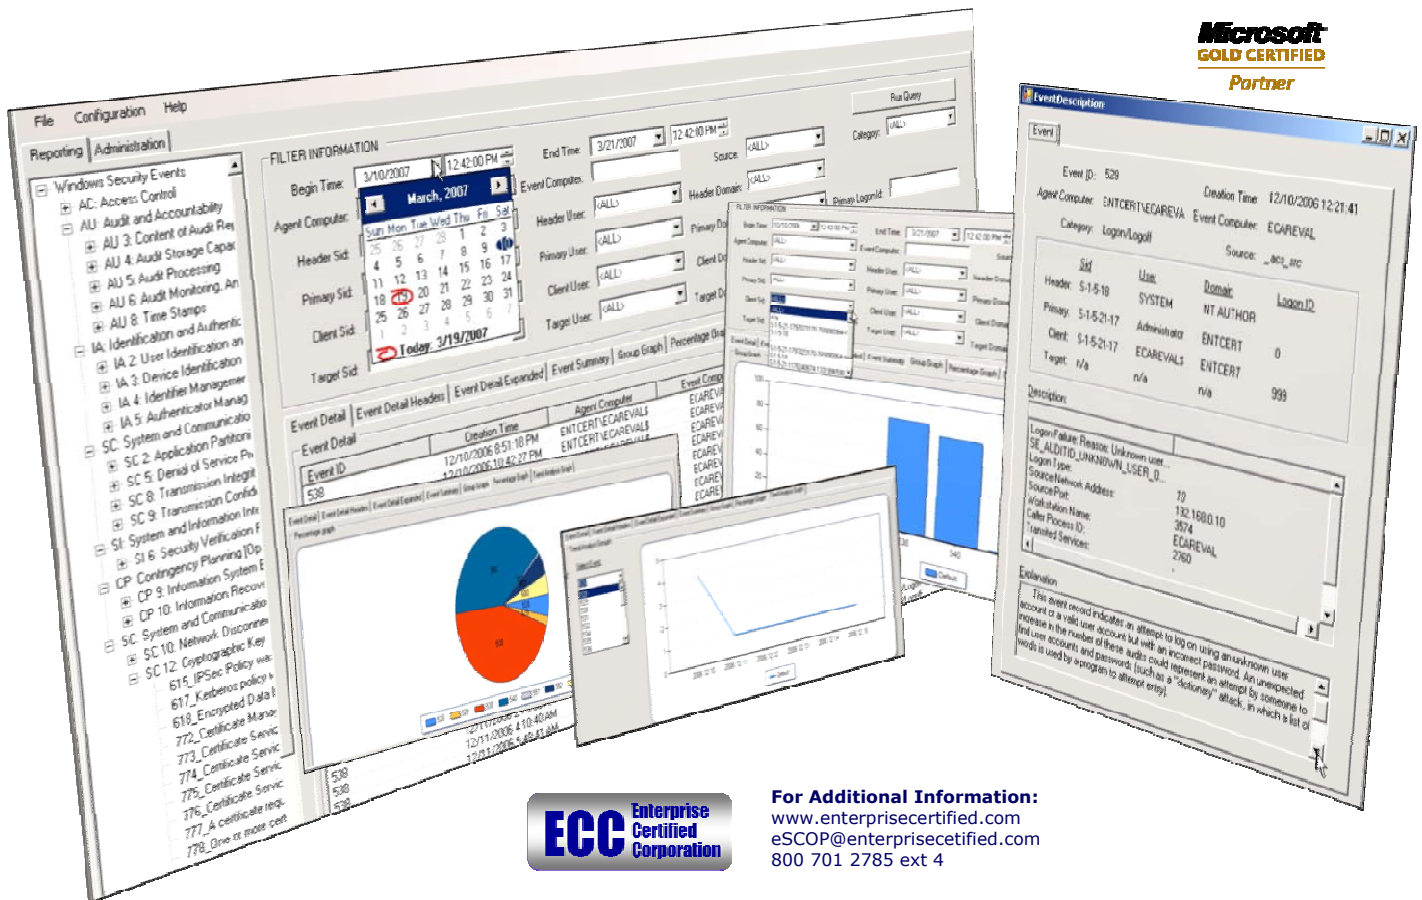

- **Dynamic Collection and Viewing:** In addition to long term archiving, eSCOP™ supports real-time monitoring built around defined security criteria and compliance requirements.
- **Structured and Unstructured Event Forensic Analysis:**

Administrators can perform event forensic analysis through eSCOP™ standard reporting structure or through administrator defined filtered reviews based upon such parameters as computer systems, users, domains, event type, date range, etc. The eSCOP™ expanded detail reporting generates the type extensive event information necessary to properly perform forensic analysis.

- **Out of the Box Compliance Oriented Rules, Views and Reports:** The eSCOP™ collection and reporting schema arranges events into recognized families including Access Management, Audit Management, Contingency Planning, Identification and Authentication, and System and Network Management.
- **No Requirement for Special Agents or Unique Configuration:** ECC eSCOP™ does not require special client agents or unique System

Center or SQL Server schema configuration. eSCOP™ is installed and management around the same agents utilized by System Center and ACS.

- **Integrated Knowledge Base:** ECC eSCOP™ provides extensive integrated information base on IT security events, industry best practice standards, and individual regulatory requirements.
- **Cross Platform Options:** Working in association with industry partners, ECC can optionally extend event collection and analysis to other operating systems and network devices.
- **Multi-Language and Expanded Regulation Support Coming Soon:** ECC is localizing multiple language versions of eSCOP™. In addition, ECC will expand the number of domestic and international regulations supported.
